

CREATE & MANAGE SECURE PASSWORDS

Protect your account. Protect our organization.

COMMON WEALTH ORGANIZATION | EMPLOYEE CYBERSECURITY AWARENESS

1 BUILD A STRONG PASSWORD

Go long:
aim for 15+
characters

Use a passphrase:
4+ random words

Make it unique and
unpredictable

river • mango •
lantern • orbit

*Example pattern only —
never use this exact phrase.*

2 AVOID EASY GUESSES

Names, birthdays
or personal details

Company names or
predictable words

Password reuse
across accounts

Simple patterns like
123456 or QWERTY

3 MANAGE PASSWORDS SAFELY

Use an organization-approved
password manager

Generate a different password
for every account

Protect the vault with a strong
master passphrase

Turn on multi-factor authentication (MFA)

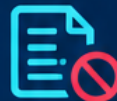

4 KEEP CREDENTIALS PRIVATE

Never share passwords —
even with colleagues

Never send passwords
in email or chat

Avoid unprotected notes
or spreadsheets

Check the website or
sign-in prompt before
entering credentials

IF YOU SUSPECT A PASSWORD IS EXPOSED

Change it immediately, report it to IT/security, and review
other accounts if it was reused.

PAUSE. VERIFY. PROTECT.

Guidance adapted from Australian Cyber Security Centre (ACSC) password and passphrase recommendations.
